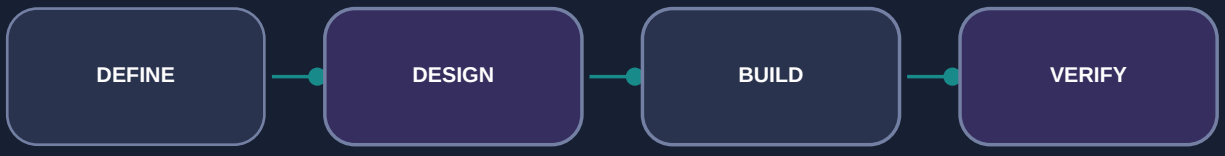
DOCUMENT UX • UI/UX Design Brief

UI/UX Design Brief

Visual system, reusable components, responsive behavior and accessibility



Project name: Slotwise (provisional)

Proposed stack: React + Vite + Tailwind • Node.js + Express • Vercel

Public-source clean-room plan • illustrative graphics, not product screenshots

Visual summary

UI/UX Design Brief

PURPOSE

Establish an original, accessible visual system and consistent interaction behavior.

KEY VISUAL

Responsive test widths

390 px mobile • 768 px tablet • 1024 px compact desktop • 1440 px desktop

REVIEW NOTE

Original content is retained after this summary; proposed visuals are illustrative, not real product screenshots.

DOCUMENT 04 OF 6

UI/UX Design Brief

Independent visual system, components, responsive behavior and accessibility

Project: Slotwise — provisional independent scheduling product

Reference: Calendly public website and help documentation; no private access.

Platform: Web | **Proposed frontend:** React + Vite + Tailwind CSS | **Backend:** Node.js + Express

Hosting preference: Vercel | **Database:** unresolved conflict between MongoDB preference and required PostgreSQL DDL

Inputs used / assumptions

No original app screenshots were provided. All visuals in this document are labeled as original illustrative mockups or design diagrams. Slotwise is a provisional name; trademark, domain, store and social-handle checks remain to be run.

Evidence discipline: Verified public capabilities are distinguished from design proposals and guesses. No review corpus, actual application screenshots, private account data, or production credentials were provided.

1. Design goals

- Make the core task understandable at first glance.
- Keep the public booking journey short and account-free.
- Make time, time zone, duration and policy visible before commitment.
- Provide actionable validation and conflict recovery.
- Use original design assets and a palette distinct from the reference brand.

2. Target personas

Persona	Context	UX priorities
Independent tutor (provisional)	Creates repeatable sessions and shares a booking link	Fast setup, clear availability, easy management
Student / invitee	Books from a link, likely on mobile	Low friction, clear time zone, confirmation
Owner returning to dashboard	Manages upcoming appointments	Find bookings quickly, safe cancellation and rescheduling

3. Visual direction and token roles

Use a restrained violet accent with neutral surfaces and strong text contrast. This is a proposed independent palette, not a reproduction of Calendly's brand. The final contrast of every actual pairing must be checked before release.

Role	HEX	Use
bg	#F7F8FC	App background
surface	#FFFFFF	Cards and panels
border	#D8DEE9	Dividers and outlines
border-input	#8B98AA	Input borders
text	#172033	Primary text
text-muted	#536176	Secondary text
accent	#6246C7	Primary actions
on-accent	#FFFFFF	Text on accent
danger	#B42332	Errors/destructive actions
success	#16794B	Successful operations
warning	#8A5300	Warnings

4. Typography, spacing and layout

System	Specification
Font	Inter, Geist or IBM Plex from a verified open-font source
Type scale	H1 32px; H2 24px; H3 20px; body 16px; small 14px; caption 12px
Spacing	4px base; 8px primary rhythm; scale 4, 8, 12, 16, 24, 32, 48, 64
Radius	6px small; 10px medium; 16px large; pill for badges
Shadow	Subtle elevation; avoid decorative overuse
Motion	Short transitions; honor prefers-reduced-motion
Content width	1200px dashboard maximum; 720px booking maximum
Responsive targets	390px mobile, 768px tablet, 1024px compact desktop, 1440px desktop

5. Contrast and accessibility

WCAG 2.2 AA is the target. Normal text needs at least 4.5:1 contrast; large text and applicable UI components need at least 3:1. Proposed token values are not proof of compliance: run a contrast checker for every foreground/background pair and every state.

- Use semantic HTML, associated labels and field-level error descriptions.
- Keep all core flows usable by keyboard, with visible focus.
- Announce asynchronous success/error status using appropriate live regions.
- Manage focus when dialogs open, close, or route transitions occur.
- Do not use color alone to indicate booking status.
- Test at 200% zoom and at 390px / 1440px.
- Honor reduced-motion preferences.

6. Component specifications

Component	Variants / states	Tokens / accessibility	Screens
Button	Primary, secondary, ghost, danger; hover, focus, disabled, loading	Accent, text, border, danger; native button semantics	S01–S11
Input	Text/email/password; empty, filled, focus, error, disabled	Surface, border-input, text; visible label and described error	S01, S03, S08
Availability editor	Day/time ranges; active, empty, invalid	Surface, border, accent; keyboard-editable fields	S04
Date selector	Available, selected, unavailable, loading	Text, muted, accent; selected state announced	S07
Time-slot button	Available, selected, stale, disabled	Surface, accent, border; explicit accessible name	S07
Booking summary	Compact/full; loading, success, error	Surface, text, muted; logical heading order	S06, S08–S10
Status badge	Draft, published, confirmed, canceled	Semantic colors plus text label	S02, S05, S11
Alert/toast	Error, warning, success, info	Semantic tokens; announce important status	All
Dialog	Confirm, destructive, informative	Surface, text, border; focus trap and return focus	S03, S10

7. Illustrative wireframe — public booking

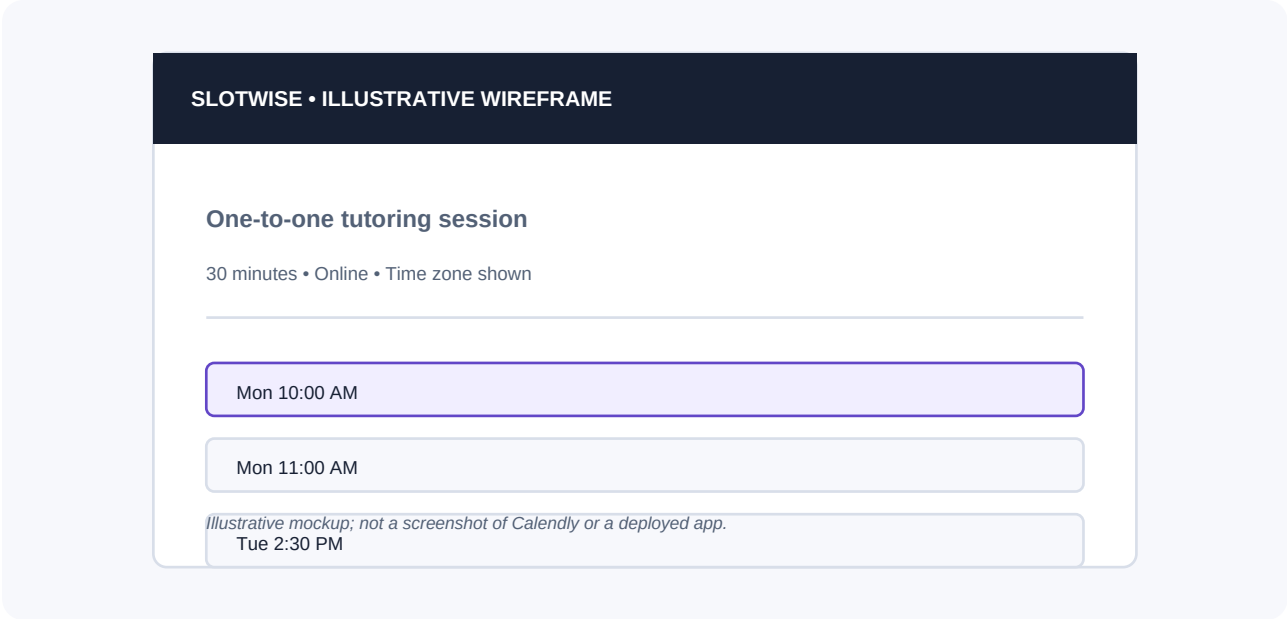


Figure 1. Original illustrative wireframe, not an actual product screenshot. Use this as a layout concept only; refine after usability testing.

8. Screen-specific interaction behavior

Screen	Interaction behavior	Empty/loading/error behavior
S01	Labels persist; show password toggle only if accessible	Loading state on submit; actionable auth errors
S02	Primary create action; event cards with status	Helpful empty state; skeleton while loading
S03	Inline validation and unsaved-change warning	Preserve recoverable input on error
S04	Explicit time zone; validate range overlap	Explain invalid ranges and missing hours
S05	Preview matches public page; confirm publish	Show save progress and publish failure
S06	Show duration, host display name and location	Unavailable/unpublished route gives safe message
S07	Date and slots use explicit time zone	No-slots state offers another date
S08	Validate fields and disable duplicate submit	Conflict returns user to slot selection without data loss
S09	Show exact date/time/zone and next steps	Never show success before server confirmation
S10	Confirm destructive actions; explain policy	Invalid token reveals no booking details
S11	Filter and sort bookings accessibly	Empty and API-error states are distinct

9. Brand candidates and verification

Name candidate	Brand idea	Checks
Slotwise	Clear and organized scheduling	Trademark/domain/store/handle: to run
MeetNest	Comfortable scheduling space	Trademark/domain/store/handle: to run
TimeSprout	Time management and growth	Trademark/domain/store/handle: to run
Bookmint	Fresh and simple booking	Trademark/domain/store/handle: to run
ClearSlot	Availability and clarity	Trademark/domain/store/handle: to run

Logo brief: create an original geometric mark based on a calendar grid or open time slot; it must work at 16px and 1024px, in monochrome and on light/dark backgrounds, and must not resemble the reference brand. Record dated verification results before selecting a name.

10. Voice and original strings

Voice quality	Do	Don't
Clear	Explain the next action	Use vague instructions
Calm	Explain conflicts neutrally	Blame the user
Respectful	State policy before commitment	Use coercive wording

Fresh key strings: “Set up a session”; “What should this session be called?”; “How long should the session last?”; “Choose the hours you can meet”; “Publish booking page”; “Choose a time”; “No times are open for these dates. Try another day.”; “Check the highlighted fields and try again.”; “Confirming your appointment…”; “Your appointment is confirmed.”

11. Rebrand sweep checklist

- Search repository and rendered UI for reference brand names and copied phrases.
- Replace logos, favicon, metadata, OG images, colors, fonts, icons and illustrations with independently created assets.
- Check source maps, screenshots, sample data and public links for accidental references.
- Verify name, domain, store and social handle status with dated evidence.
- Run a final visual and text review on all screens at 390px and 1440px.
